Module 4.2: Rogue wifi challenge

1. Choose one of the Mikrotik routers in the lab, and using your iMac wired connection, configure a hidden wifi network and NAT to enable ssh into your iMac from the WAN.
2. Challenge your friends to login to your iMac by the WAN connection and create a folder there with a secret message (just like planting a virus)
3. Challenge your friends to find the wireless network that you have hidden based on the MAC address of the mikrotik device
4. Hide your mikrotik router somewhere in the elab connected to power (no WAN connection needed)
5. Challenge your friends to find the hidden access point.
