Dream home project

You have just inherited a huge $10M fortune and decide to design your own home. Being smart about all things sustainable, you decide to use your ample funds to design a home that will be the envy of every other home builder around the globe, and include ideas and concepts never before seen on planet earth.

Your project may be of any size, but must meet the following criteria:

1. It must be located on this planet, though a Mars option is possible with some discussion
2. It must harvest its own energy and be completely self-sustaining with respect to energy: lighting, heating, cooking, laundry and internal electrical use
3. It must harvest its own water
4. It must take care of its own waste
5. As much as possible, it should be sustainably designed, using local or recycled materials.
6. It must be a healthy, well ventilated space with ample lighting and low CO2
7. It must not contain any hazardous vapors, chemicals or toxins
8. It must be able to house at least two people, preferably three (one could be a child)
