Arduino

You will be using a kit from Vilros, with a manual that is linked below.

To start, make sure you are using the latest arduino IDE:

https://www.arduino.cc/en/software/

You can then download the examples:

Download uskcode-master.zip (application/zip, 44.8 KB)

The nice thing about the new Arduino IDE is you just click on the example in the folder you want to test, no need to add it to the samples page.
Test out the examples, creating each circuit.
Here's a pdf of the manual:

https://elab.hpa.edu/cs/pdf/arduino%20manual.pdf
