Meshsense notes

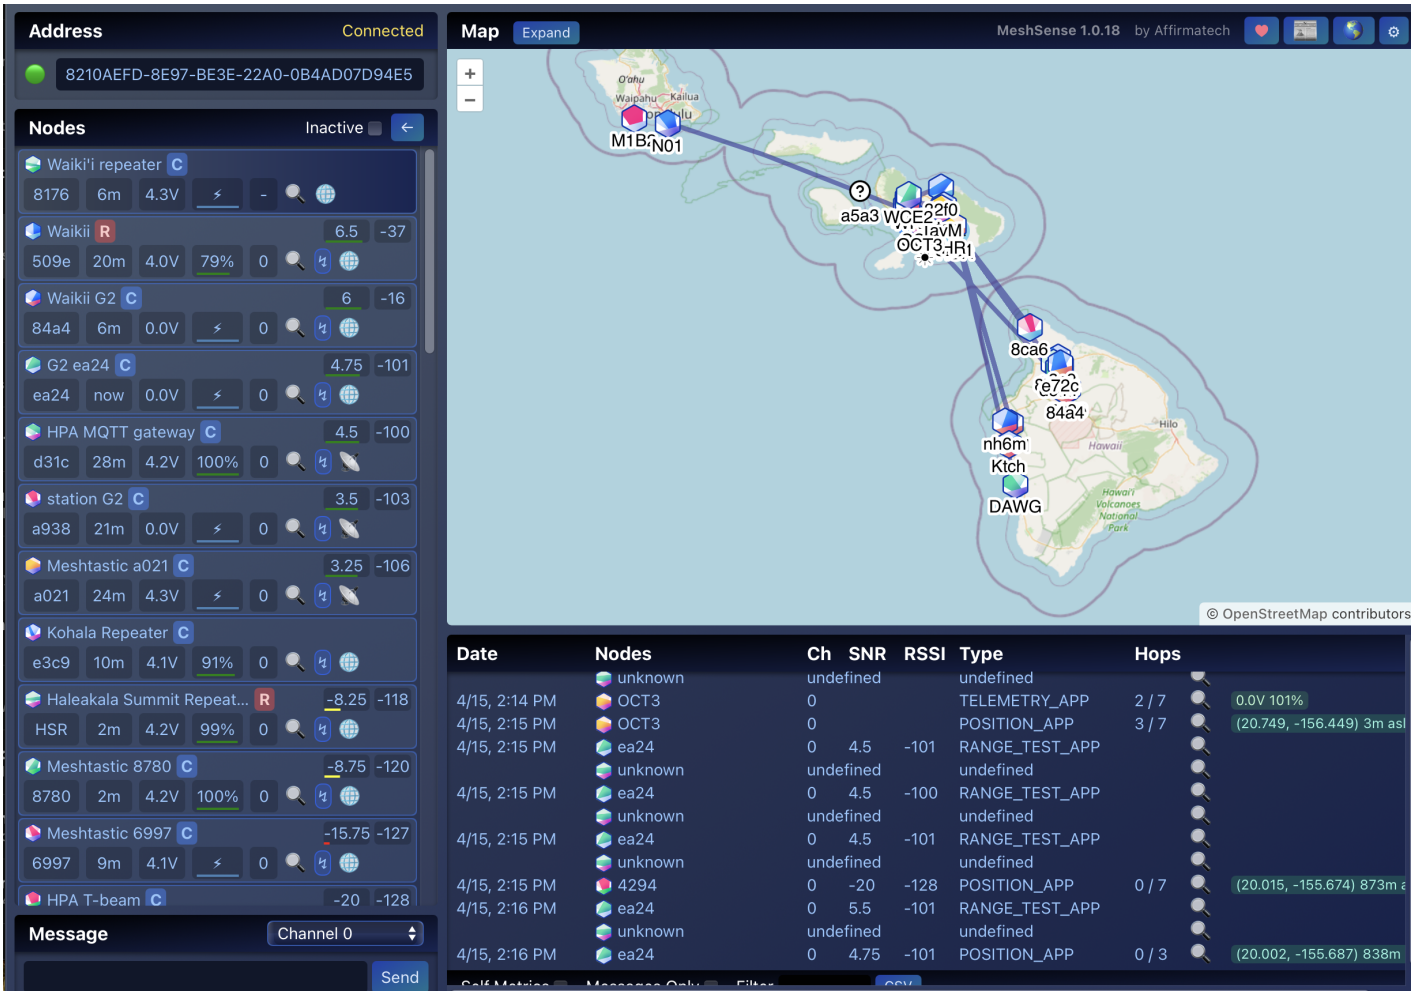

Meshsense:
Meshsense is the best tool for managing multiple units, as well as deep info into your own mesh unit.
It is NOT a configuration utility, though it can read config files for confirmation.
It IS an excellent dashboard for multiple mesh units with links outlned:

https://meshsense.affirmatech.com/

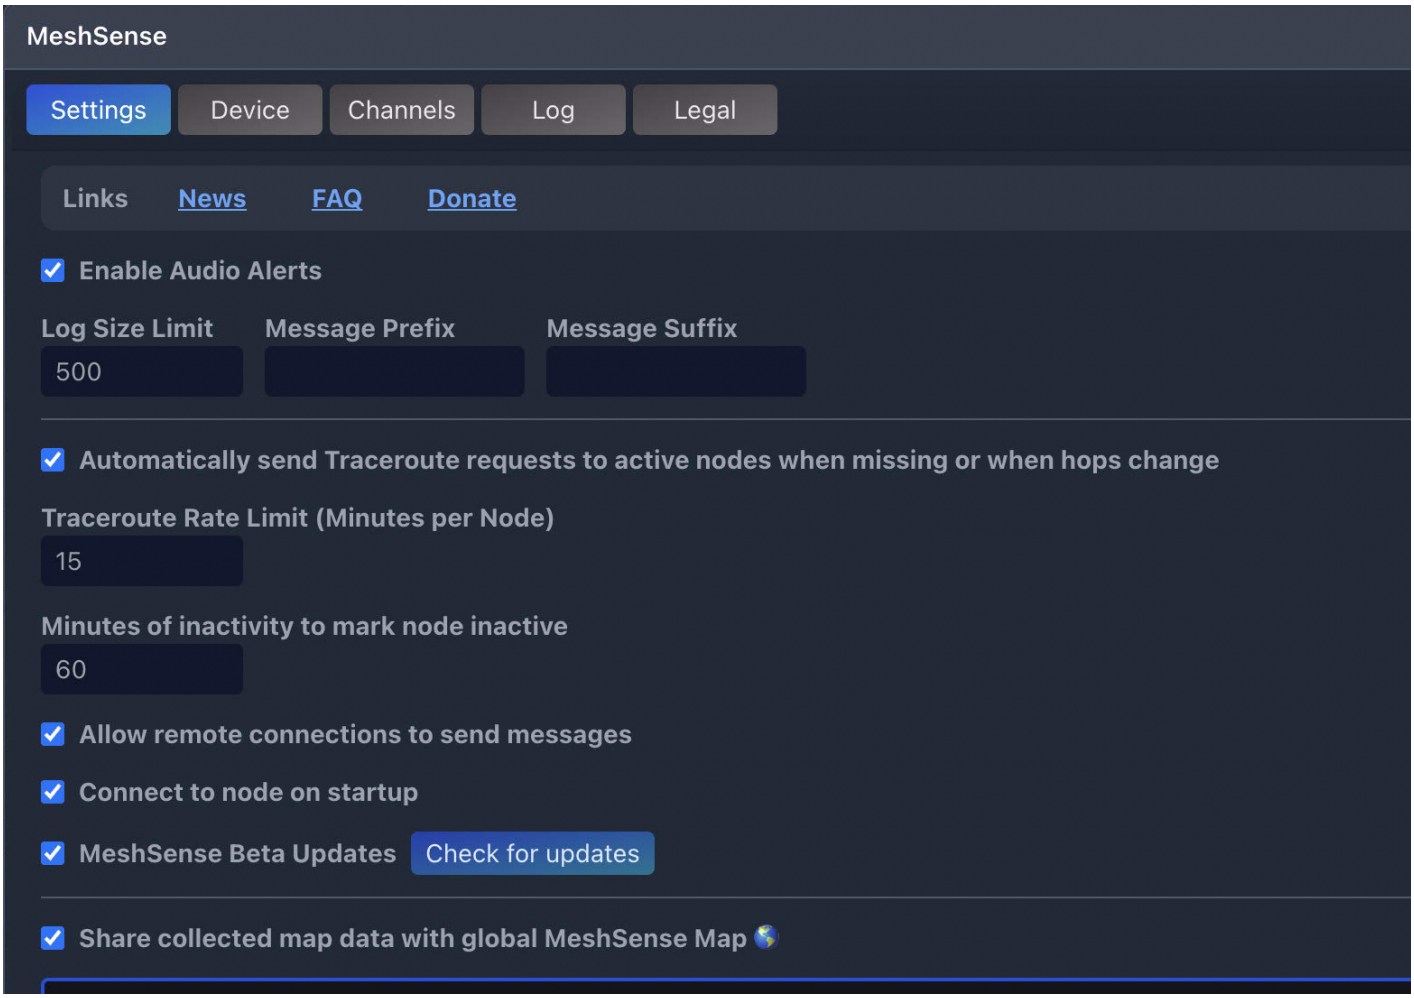

Here is a global view of our interisland mesh network as of April 15, 2025:

And this is the level of detail available for devices (note, this one is miles away, connected by microwave backhaul):

If you are local to the device (not internet or bonjour) you can open settings on the upper right:

Another wonderful thing about meshsense is that it creates its own web server that you can access anywhere on your network, or if you can port forward, you can see this info from anywhere-excellent if you are managing a repeater, router or dedicated client acting as a local gateway.

To connect, it works with bluetooth (assumes your code is 123456) or over IP address.
